

SCS RMC SYSTEMS AUTOMATE THE OPERATIONS OF YOUR LANDFILL

SCSRMC.com is the cloud-based dashboard for your landfill. We automate your processes and provide you with actionable intelligence so that you can work smarter rather than harder.

We make it so that you can work from anywhere at anytime.

Through one “pane of glass,” users view and interact with their data coming from sources such as:

Automatic and Remote Sensors

Control and SCADA Systems

Electronic Forms

Geographic Information Systems (GIS)

Aerial Imagery (e.g., drones, satellites, planes, etc.)

We use this data to:

- Improve the operations of your facilities – including but not limited to filling, gas collection and control systems (GCCS), flare stations, landfill gas (LFG) to energy plants, renewable natural gas (RNG) plants, etc.
- Reduce operations and maintenance costs
- Reduce greenhouse gas (GHG) emissions
- Reduce environmental risks
- Reduce health and safety risks
- Improve quality of life for the operators, managers, engineers, and the local community

SCS FIELD SERVICES

ADVANCED DATA COLLECTION AND VISUALIZATION USING DRONES AND GIS

SCS FIELD SERVICES

Improve your site management and data collection:

- **Speed** - electronic field collection, inspection and evaluation
- **Cost** - less labor, more automation
- **Safety** - observation from a distance

Remote Methane Leak Detection 3D

Topographic Mapping

High Resolution Imagery & Video

Infrared Thermal Mapping Airspace

Consumption Analysis 3D Digital

Twin

Intuitive Data Visualization Historical

Data Comparison

Plane and Satellite Imagery

Fully integrated with all RMC

Systems on SCSRMC.com

- Fully licensed & insured UAV pilots nationwide
- Experts in solid waste & related facilities
- View actual/conceptual site conditions in augmented 3D
